IT Support Project: Multi-Monitor Display Troubleshooting

Overview

Investigated and resolved a workstation display issue where a user's second monitor suddenly stopped working and displayed a "No Signal" message.

Responsibilities

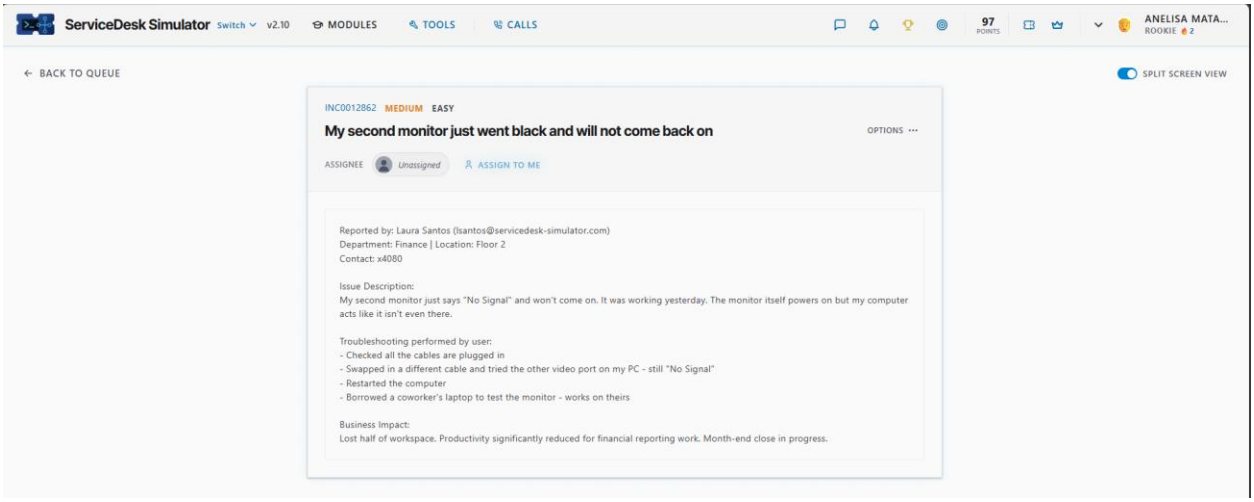

- Reviewed the incident ticket and user-reported troubleshooting steps.
- Connected to the workstation through a remote desktop support environment.
- Verified monitor, cable and port functionality.
- Examined Windows display settings and hardware documentation.
- Identified that the system was using Basic Display Adapter instead of the appropriate graphic driver.
- Diagnosed the root cause of graphics/display issue affecting multi-monitor support.
- Documented findings and recommended corrective actions.

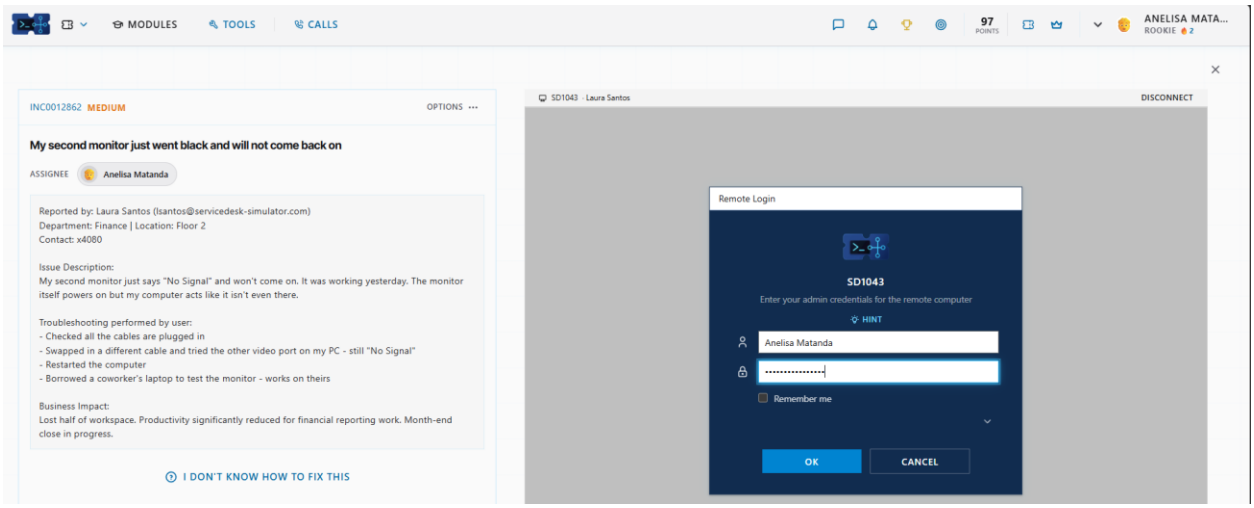

Skills Demonstrated

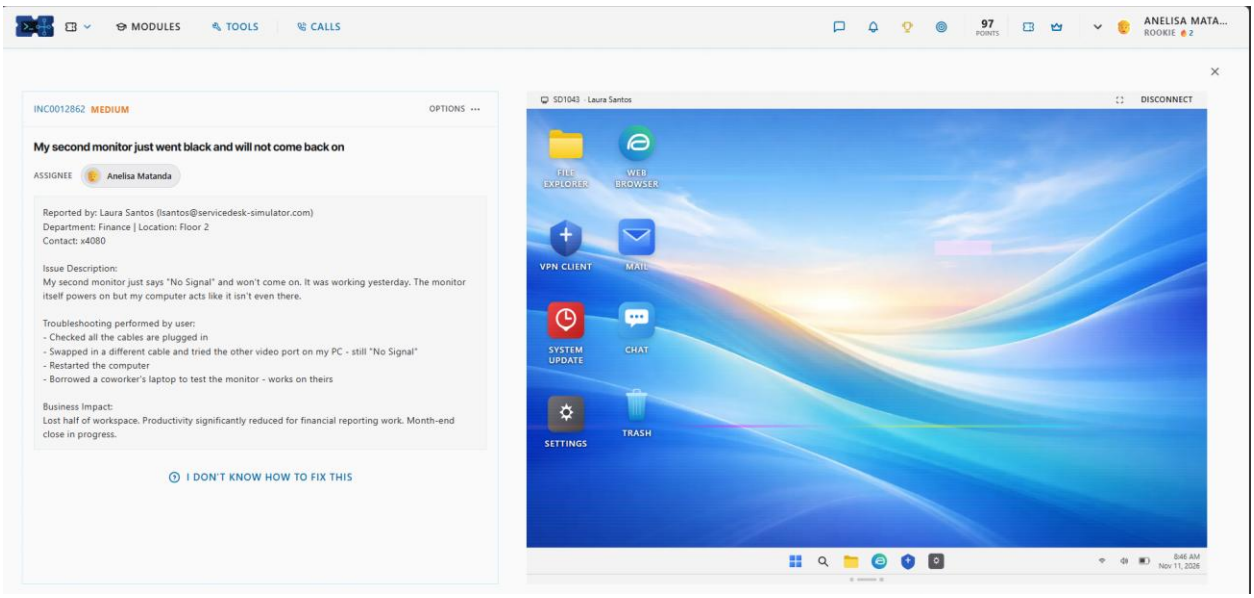

- IT Help Desk Support
- Remote Desktop Troubleshooting
- Windows Troubleshooting
- Hardware Diagnostics
- Incident Management
- Technical Documentation

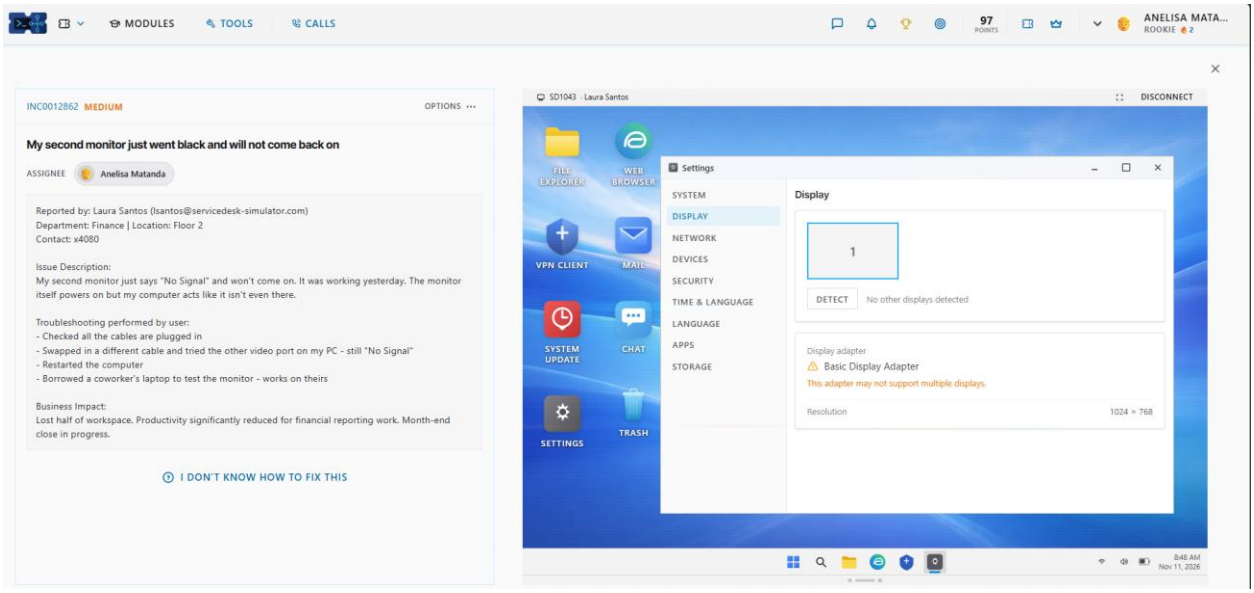

Outcome

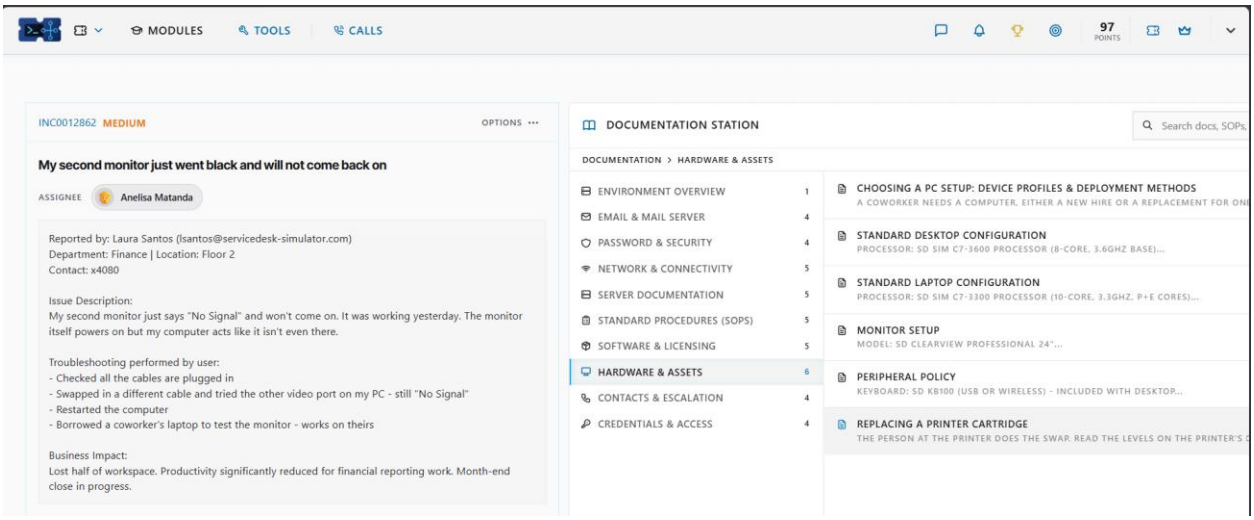

Successfully identified the cause of the display issue and determined the appropriate resolution path to restore dual monitor functionality.

Issue Description:
My second monitor just says "No Signal" and won't come on. It was working yesterday. The monitor itself powers on but my computer acts like it isn't even there.
Troubleshooting performed by user:
- Checked all the cables are plugged in
- Swapped in a different cable and tried the other video port on my PC - still "No Signal"
- Restarted the computer
- Borrowed a coworker's laptop to test the monitor - works on theirs
Business Impact:
Lost half of workspace. Productivity significantly reduced for financial reporting work. Month-end close in progress.

Closing Ticket

Investigated the reported issue where the second monitor displayed "No Signal" and was not detected by the system. Verified that the monitor, cable, and video port were functioning correctly based on user troubleshooting. Further investigation showed the computer was using a Basic Display Adapter and could not detect a second display. Determined the most likely cause to be a graphics/display driver issue. Advised updating or reinstalling the display driver to restore multi-monitor functionality.
